REVIEW

of the educational and scientific program "Thermal Power Engineering" of the third level of higher education (Philosophy Doctor, PhD) by specialty 144 "Heat power engineering" branch of knowledge 14 "Electrical engineering", prepared at the Institute of Engineering Thermophysics of the National Academy of Sciences of Ukraine

The educational and scientific program presented for consideration corresponds to the modern level of knowledge in the field of thermal energy and thermal physics, it logically combines both all traditional basic units and modern promising directions of development of these important engineering sciences, and therefore allows to form a complex of system knowledge of the future philosophy doctors and will become a guarantee as well as the fundamental basis for determining the priority areas of further development and effective conducting of their own scientific research in this field.

The program fully corresponds to the modern international level and promising trends in the teaching of thermal energy and thermal physics and is aimed at training specialists who will be able to effectively integrate into the world scientific community already during the third level of training and, of course, after its completing. The structure of this program fully complies with the principles of sequence and continuity of teaching and the existing formal requirements of the Ministry of Education and Science of Ukraine for such documents.

The mentioned above allows me to believe that the educational and scientific program of the third level of higher education in the field of training in the specialty 144 "Heat power engineering" in the branch of knowledge 14 "Electrical engineering" can be recommended for approval by the academic council of the ITTF of the National Academy of Sciences of Ukraine.
