

To Whom It May Concern

**REVIEW-FEEDBACK**

**to the educational and scientific program “Thermal Power Engineering” of the third level of higher education (PhD, Doctor of Philosophy) by specialty 144 “Thermal Power Engineering” of the field of knowledge 14 “Electrical engineering” prepared at the Institute of Engineering Thermophysics of the National Academy of Sciences of Ukraine**

The educational and scientific program “Thermal Power Engineering” presented for consideration was developed at the current level of scientific knowledge and fully corresponds to the modern standards in the field of thermal power engineering and thermal sciences.

This program was developed taking into account current trends and achievements in modern thermal power engineering and includes modern topics of renewable energy sources, energy efficiency and environmental protection requirements. The program successfully combines scientific and applied aspects of training, as a result of which doctoral students have the opportunity to obtain fundamental theoretical knowledge and master various industrial applications. Leading scientific departments and laboratories of the Institute of Engineering Thermophysics of the National Academy of Sciences of Ukraine provide doctoral students with the opportunity to conduct their own scientific and applied research, which forms the basis of their dissertations. Scientific supervisors of dissertations and teaching staff of educational courses within the framework of the program have high professional scientific and teaching qualifications.

To conclude, I strongly believe that the educational-scientific program of the third level of higher education in the field of training in the specialty 144 “Thermal Power Engineering” in the field of knowledge 14 “Electrical engineering” can be recommended for approval by the academic council of the Institute of Engineering Thermophysics of the National Academy of Sciences of Ukraine.
